

MISAE SARABIA MOLINA

Full-Stack Software Developer

Ciudad Obregón, Sonora, Mexico | Open to remote | misaelsarabiamolina@gmail.com

Portfolio: <https://anemone-dev.vercel.app/> | GitHub: github.com/MisaSM

PROFESSIONAL SUMMARY

Full-Stack Software Developer with production experience across React, TypeScript, PostgreSQL, Angular, and C#.NET. Sole developer of a five-application delivery platform and a core contributor to a four-application monorepo, with work spanning concurrency control, row-level security, real-time data, PWA delivery, and CI/CD. Prior experience in government and aerospace software, including a biometric authentication application. Bachelor's Degree in Software Development and Management, 4.0/4.0 GPA, graduated with honors. C1 English.

TECHNICAL SKILLS

Languages: TypeScript, C#, SQL, JavaScript, HTML5, CSS3

Frontend: React, Angular, TanStack Router, TanStack Query, Tailwind CSS, Radix UI, Ant Design, Vite, React Native (Expo), PWA / Workbox

Backend: C#, .NET, .NET Core, ASP.NET, REST APIs, JSON, XML, Supabase Edge Functions (Deno)

Databases: PostgreSQL (row-level security, PL/pgSQL, triggers, migrations), SQL Server

Services & integrations: Supabase Auth / Realtime / Storage, Firebase Cloud Messaging, Twilio, Sentry, Leaflet

CI/CD & tooling: Git, GitHub Actions, Cloudflare Pages, Docker, Linux, pnpm workspaces, Supabase CLI

Practices: Agile, Scrum, pull-request code review, monorepo architecture

PROFESSIONAL EXPERIENCE

Full-Stack Developer - PorChat

November 2025 - Present

PorChat Go - delivery platform (April - July 2026), sole developer

- Sole developer of a five-application delivery platform (driver, group leader, publisher, admin, and public link ingestion) built on a 16-table PostgreSQL schema with a full row-level security policy set.
- Built the concurrent shipment-claim path as a Deno edge function, pairing sequential authorization and eligibility checks with an atomic conditional UPDATE so exactly one driver wins a contested shipment; conflicting requests receive HTTP 409, covered by a dedicated integration test.
- Implemented a Firebase Cloud Messaging v1 push pipeline in Deno, using WebCrypto for authentication and data-only payloads so the service worker controls click routing.
- Moved critical business logic into PostgreSQL, including server-side shipping-cost calculation to close a client-side price-tampering hole and SECURITY DEFINER triggers keeping derived delivery counts and ratings consistent across every write path.
- Built shared component and type packages across pnpm workspaces and established GitHub Actions CI gates for typecheck, lint and build, with automated deployment of five Cloudflare Pages applications and all edge functions.

PorChat - four-application monorepo (November 2025 - present), team of six

- Contributed to a four-application monorepo (React/Vite store and admin, Expo React Native client, landing site) under two-reviewer pull-request approval, CI lint and type-check gates, and a stage-to-production promotion pipeline.
- Led the store application's PWA conversion with Workbox, implementing offline handling, platform-specific installation flows, update checks, and a documented service-worker recovery procedure.
- Diagnosed a silent Supabase Realtime failure in which duplicate postgres_changes subscriptions caused channels to self-unsubscribe, replacing ad-hoc subscription with a ref-counted channel registry.
- Identified and closed a row-level security gap exposing impersonation audit data to authenticated clients, and reworked session detection to prevent cross-account leakage.
- Traced unexpected save behavior to React Query pausing rather than failing offline mutations, and reconfigured mutation network mode to stop stale writes replaying minutes later.

Full-Stack Developer Intern - Pinnacle Aerospace / Sonora Software

January 2025 - May 2025

- Developed Angular and C#.NET features for internal HR tooling, including role-based scheduling workflows for in-office and remote work assignments.
- Built XML/JSON parsing utilities and contributed to REST API cleanup and maintenance.
- Collaborated in a cross-functional Scrum team alongside QA, DevOps, and Tech Leads.

Frontend Developer - Government of Sonora, Subsecretaría de Gobierno Digital

March 2024 - October 2024

- Developed a biometric authentication application in C#/.NET integrating the DigitalPersona SDK, replacing manual identity verification for parents.
- Built an Angular frontend for CENDIS, digitizing a paper-based attendance process for a special-needs education facility and improving record accuracy and parent accessibility.
- Refactored university website content and structure to comply with government web standards.

EDUCATION

Bachelor's Degree in Software Development and Management | 2023 - 2025

Universidad Tecnológica del Sur de Sonora | GPA 4.0/4.0 | Graduated with Honors

Associate's Degree in Multiplatform Software Development | 2021 - 2023

Universidad Tecnológica del Sur de Sonora

LANGUAGES

Spanish (native) | English (C1)
